Summary

Software Engineer with 5+ years of experience building scalable, maintainable, and high-performance web applications and Node.js systems.

Experience

- **SpotDraft | Software Engineer** **Jan 2023 – Present**
  - **Review-AI (AI-powered contract review)**: Led frontend development for Review-AI, an AI-powered legal contract review feature integrated into an enterprise Contract Lifecycle Management (CLM) platform.
  - **Frontend Architecture**: Designed scalable frontend architecture to handle large, complex legal documents with rich interactions, annotations, and metadata.
  - **AI-driven Workflows**: Built reusable UI components and workflows to visualize AI-generated insights, suggestions, and document diffs in a clear and actionable manner.
  - **Performance Optimization**: Optimized frontend performance and memory usage for long-running, document-heavy review sessions, preventing UI freezes and memory leaks.
  - **Pluggable Frontend Modules**: Architected a reusable, pluggable frontend module that could be seamlessly integrated across multiple web applications and Microsoft Office / OnlyOffice plugins.
  - **Microsoft Word & OnlyOffice Plugins**: Designed and built high-performance, scalable plugins for Microsoft Word and OnlyOffice to support in-editor contract review and collaboration.
  - **Large Document Processing**: Optimized systems to handle very large legal contracts within web and plugin environments without impacting responsiveness.
  - **Cross-team Collaboration**: Collaborated closely with backend and ML teams to integrate AI responses into production-ready frontend workflows, and worked with PMs and designers to refine UX.
  - **Product Impact**: Revamped a high-traffic contract detail page, improving usability, engagement, and overall user experience for core customer workflows.
  - **Engineering Initiatives**: Reduced Angular build and serve time by 40% through code splitting and refactoring; reduced bundle size by 39% and improved First Contentful Paint (FCP) by 30% across the frontend monorepo.
  - **Developer Experience**: Improved local and CI test execution time by 40% by refactoring 300+ test files, reducing Jest memory usage, and removing performance bottlenecks.
  - **Backend Optimization (Node.js)**: Optimized performance and memory usage of CFExporter, a stateless Node.js document processing service, using worker threads and scalable coding practices, reducing on-call issues by 90%.
  - **Tech Stack**: TypeScript, JavaScript, Angular, HTML, CSS, SCSS, Node.js, Express, Nx, RxJS
- **Interbiz Consulting Pvt. Ltd. | Software Engineer** **Aug. 2020 – Jan. 2023**
  - **EViewIOT Platform**: Architected EViewIOT, a real-time IoT platform for monitoring and controlling 10,000+ online IoT devices with low-latency updates.
  - **Reusable UI Systems**: Built white-labeled, reusable, and pluggable UI components to support customization across multiple client deployments.
  - **Complex Data Visualization**: Designed and scaled a custom reusable table component supporting nested rows and dynamic columns for complex data representation.
  - **Real-time Polling System**: Developed a low-latency polling system using C# and .NET to fetch device updates and reflect changes in the UI in near real time.
  - **Performance Optimization**: Optimized Angular applications using efficient change detection strategies and background processing to improve responsiveness.
  - **Mentorship**: Conducted code reviews and technical knowledge sharing for a team of 20+
  - **Tech Stack**: C#, .NET, TypeScript, JavaScript, Angular, HTML, CSS, SCSS

Skills

- **Programming Languages**: TypeScript, JavaScript,Python, C-sharp
- **Technical Skills:**: Data structure and Algorithms, object-oriented programming, Functional Programming, Performance Optimization, Chrome Dev-tools, Critical Debugging,Low-level design (LLD) and High-level Design (HLD).
- **Development**: Angular,RxJs, React, HTML, CSS, SCSS, Cursor, Figma, Jira, Git, VsCode , NxConsole, MonoRepo, Css-System, Metabase, Sentry, DataDog,
- **Platforms**: Mac, Linux, Windows

Education

Government Engineering College Bilaspur **2015 – 2019**
Bachelor of Technology, Information Technology; CGPA: 7.52

Jawahar Navodaya Vidyalaya Koriya, Chhattisgarh **2014 – 2015**
High School, Science; 86%

Projects

- **Automobile Vehicle Servicing System – Janta Garage**: Built an end-to-end platform connecting vehicle owners with service providers, enabling service discovery, booking, and job management.
  - **Web Platform**: Developed a web application for service providers to list services, manage availability, and handle incoming service requests.
  - **Mobile Application**: Built a mobile application using React and React Native to allow users to place service orders and track service status.
  - **Notification System**: Implemented a reliable notification system to keep users and service providers informed of order updates and status changes.
  - **Job Allocation System**: Designed and implemented service job allocation and availability logic.
- **Tech Stack**: React, React Native, Firebase, JavaScript, TypeScript, Node.js, Bootstrap
